

“How the uncertainties associated with patch testing, including false positives and negatives, could be minimized”

Magnus Bruze

Department of Occupational and Environmental Dermatology

Skåne University Hospital

Malmö, Sweden

In vivo

# Diagnosis of contact allergy and allergic contact dermatitis

# What to patch test with

Every exposure/contactant that can explain the dermatitis under investigation - wholly or partly in case of contact allergy

# Patch test preparations

Standard series

Additional series

Patient-supplied products

# How to choose test concentration?

As high as possible without causing adverse reactions, particularly active sensitization

Classification

The dose is determined by the

Concentration

Volume/amount applied

# Petrolatum

Convenient to use

Prevents degradation,  
oxidation and polymerization but not  
evaporation

Difficult to apply a fixed dose

# Intraindividual variation
